

EdgeBlood

EdgeSuite module

COMPLETE BLOOD MANAGEMENT SYSTEM

All of our EdgeSuite Software is based on a common base which permits a better interfacing

SOFTWARE SOLUTION

Vein to Vein tracking from donor recruitment and collection to patient transfusion

Software for blood collection center and blood banks

From donor collection to the patient: an innovative system to manage the entire transfusion cycle.

A FULLY FUNCTIONAL COVERAGE

- Donor recruitment
- Deliveries and shipments
- Easy planning of resources, collections
- Eurocode and ISBT128 compliance
- Management of different types of collection
- Advanced blood product order management
- Interface with EdgeLab for complete test management
- Electronic compatibility calculation
- Detailed management of donor immunohematology
- HLA module with donor search according to reference algorithms
- Production process and labelling
- Detailed traceability
- Inventory tracking
- LDAP compatibility
- Products quarantine

SOFTWARE ADAPTED TO YOUR BUSINESS

EdgeBlood's unique configurability suits the needs of all blood banks and collection centers, regardless of the organization size or number of operational sites.

With proven robustness and high performance capabilities, EdgeBlood can handle the high activity of national and regional organizations.

Flexible and available in independent modules, EdgeBlood is also suitable for smaller organizations.

The flexibility of EdgeBlood's settings allows it to cope with most changes in practice or regulation without any changes to the software source code.

EASY TO TRANSLATE SOFTWARE

With its built-in translation tool, EdgeBlood can be provided in many languages.

SAFETY, TRACEABILITY AND ERGONOMICS

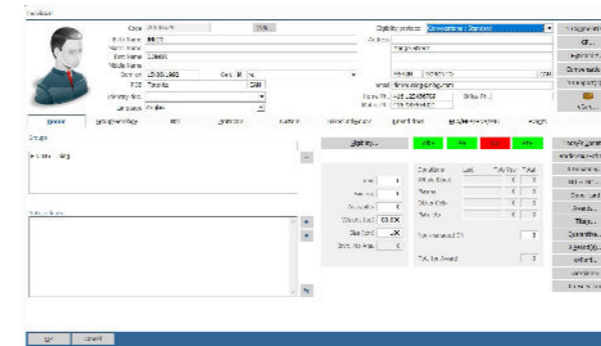

Blood transfusions require the highest level of operational security of computer data systems.

EdgeBlood has been helping its users to meet their security requirements since 1992.

Numerous controls and alerts are included in the standard system and can be configured to meet the user's needs.

All operations made in the applications are traced and easily accessible by the center's staff.

EdgeBlood has achieved a high level of usability that has evolved over the years. The screens have been redesigned according to the latest ergonomic standards to provide clear and easily visible information to the staff at the blood transfusion sites.

THE LARGEST EUROPEAN BLOOD MANAGEMENT CENTRE

EdgeBlood helps to manage Europe's largest collection centers, which can be local, regional or national in countries such as:

- Germany
- France
- Belgium
- Switzerland
- Austria

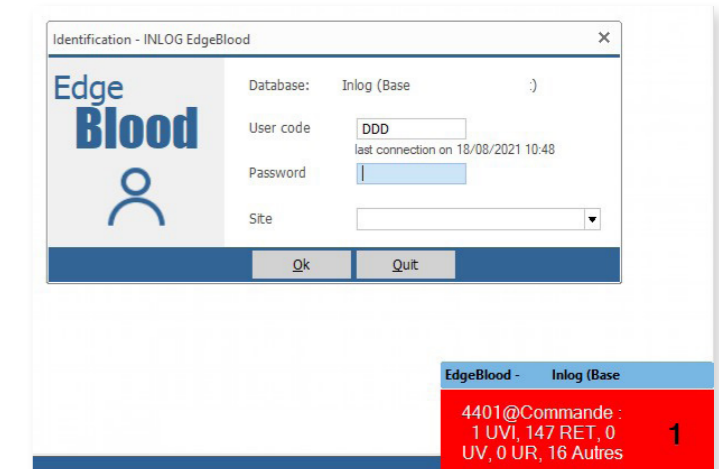

THE MOST RECENT QUALITY STANDARDS

Inlog's quality management system complies with current medical standards. Inlog software is CE marked since March 2020.

The main components are easy to use and help to avoid user errors. Online help is integrated.

Bar code printing and reading can be used at all levels of operation.

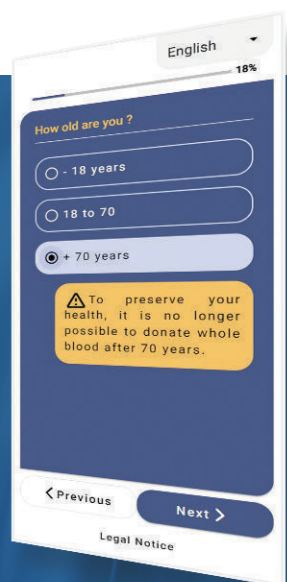

An innovative and configurable alert management system allows users to be alerted according to operating emergencies: stock levels, receipt of urgent orders, quarantine.

Web donor questionnaire

The new web-based questionnaire, accessible on PC, tablet or smartphone, interfaced with EdgeBlood, helps to recruit of new donors and optimizes the collection process.

This module takes into account the necessary security of data accessible on the Internet and has an architecture reserving the anonymous nature of the answers.

A WORLD-LEADING SOFTWARE FOR BLOOD CENTERS AND BLOOD BANKS

- Local, regional, or national implementation possibilities
- Efficient management of millions of donors, donations products and patients
- High degree of customization and flexibility for complex organizations
- Fast and secure deployment procedures for small blood organizations
- Multilingual availability and integrated software (English, French, German, Flemish)
