

SMART MEDICATION ADHERENCE PROACTIVE REMOTE PATIENT MONITORING

This telemedicine solution consists of a remote patient monitoring platform coupled with smart medication adherence IoT devices.

BENEFITS

Perfectly suited to nursing homes and healthcare facilities, it allows residents and patients to better adhere to their treatment, and thus improves their well-being. And for healthcare professionals, it's a simple, non-intrusive way to make sure their patients are taking their medications correctly and to monitor a series of vital data.

FEATURES

Medication monitoring

Connected medication dispensers control medication intake and ensure the correct dispensing of the prescribed dose in real time.

Vital sign monitoring

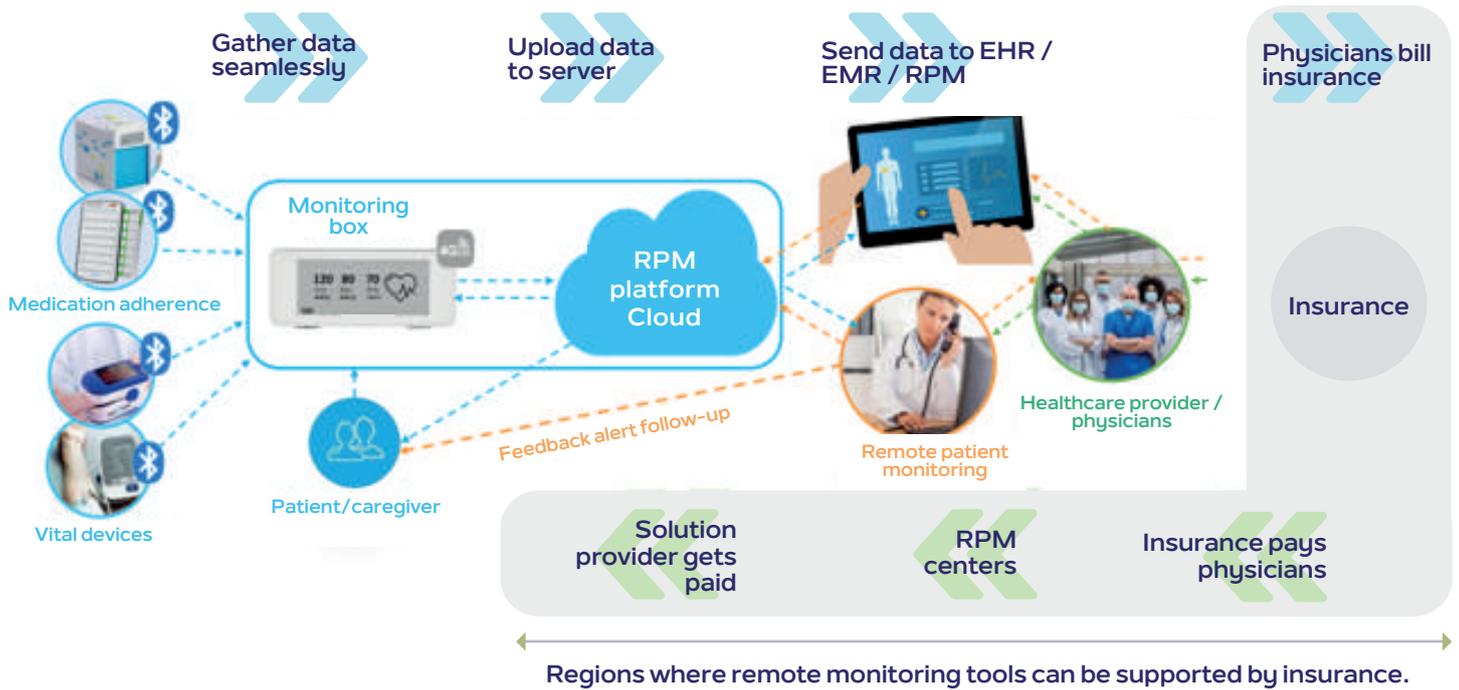

A variety of medical devices continuously collect vital patient data and send it to the monitoring box.

RPM Infrastructure

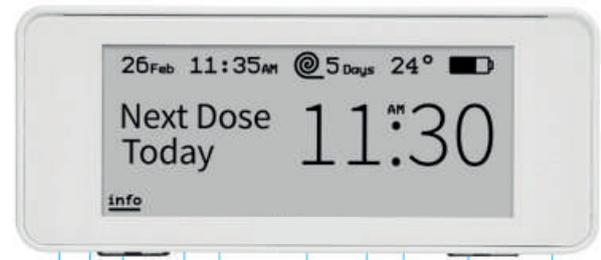

The management platform allows remote supervision by care staff, while continuously monitoring the data collected. Alerts are activated as soon as an anomaly or incidence is detected.

INFORMATION WORKFLOW

MONITORING BOX KEY FEATURES

- **Simplicity** : just turn it on to use it
- **Customizable** in size and design
- **NFC reporting capability** : medication package identification for tracking and refill
- **Alphanumeric communication screen** : personalized messaging with patient
- **Seamless BT & 4G connection / Vital sign aggregation** : no need for an app
- **Reminders** : visual and audio reminders, notifications, text messages, emails and reports
- **Reminds** patients to take their vital sign and medications as prescribed
- **Log** vital sign measurements and medication adherence-compliance and persistence
- **Connect seamlessly** to the RPM server through an API
- **Report** non-compliance events to caregiver 24/7
